

## PROJECT FACT SHEET

**Project Title:** Establishment of a Watershed Coordinator for the North Bosque River Watershed

**Project Lead:** [Brazos River Authority](#)

**Project Website:** <http://www.brazos.org/NorthBosque/NorthBosqueHomepage.asp>

**Funding Source(s):** [EPA](#) / TSSWCB / Authority

**Project Partner(s):** [TSSWCB](#)

**Project Description:** The objectives of this project include:

- identifying all pollution prevention projects and measures that are currently underway in the watershed
- tracking the progress of these projects and measures
- tracking rules and regulations that affect operations of entities in the watershed
- reviewing water quality data for trend identification
- providing opportunities for efficient and effective use of resources
- communicating through regularly scheduled stakeholder group meetings.

Another objective of this project is to identify areas within the watershed that may not have received the attention necessary to reduce potentially detrimental impacts to water quality. The project also plans to identify new and emerging technologies beneficial in reducing point and nonpoint source pollution. The Brazos River Authority's web site will host current information related to activities within the watershed. A watershed strategy will be developed from the information collected through this project.

**Potential Project Benefits:** The success of this project will be measured by the increased communication between stakeholders, the benefits to stakeholders of having a single point of contact, and the increased awareness of overall level of effort that is underway in the watershed to improve water quality. Other benefits could include more efficient use of federal, state, and local resources by reducing redundant activities and potentially a more rapid advancement towards measurable water quality improvements.

**Potential Project Schedule:** The project period is scheduled to run from December 2003 through March 2006.

**Current Project Status:** This project is currently active. Stakeholders and projects are being identified as the project continues. Water quality data, information on new technologies, etc. are being gathered and are now available on the website. Newsletters are being distributed on a monthly basis.
