

PROJECT FACT SHEET

Project Title: Insecticide baits for suppressing house flies on dairies

Project Lead: [Texas Cooperative Extension](#)

Principal Funding Provided By: Texas Cooperative Extension

Supplemental Funding Provided By: [Texas Agriculture Experiment Station](#)

Project Description: New insecticide formulations are continuously being developed. However, very little information is available on their effectiveness for suppressing the target insect pest. This study examined two new baits for suppressing house flies on dairies and other confined animal facilities.

Project Benefits: Results from this study will assist producers and homeowners with their decisions regarding the selection of proper and effective insect baits for suppressing house flies. Additionally, through extension publications, this information will be used to educate the general public on the proper methods for using these products.

Project Schedule: Summer 2004

Project Status: Data collection will occur for two more years. Results will be tabulated and placed in refereed publication.
