Post Oak Savannah

Background and Context
SURFACE WATER
Owned by the State, Regulated by Texas Commission on Environmental Quality (TCEQ), & managed by River Authorities
Groundwater in Texas aquifers is privately owned & regulated by 100 Groundwater Conservation Districts (GCDs)
Geology / Aquifers

University Station, Box X
Austin, Texas 78713-7308
(512) 471-1534

SPRINGS
- Very large spring (>100 m³/s)
- Large spring (10 to 100 m³/s)
- Selected, moderately large spring (1 to 10 m³/s)
- Wells

AQUIFERS
Dark tint represents unconfined aquifer; lighter tint represents confined aquifer or aquifer covered by other rock layers

Springs and Aquifers in Texas.
Major Aquifers of Texas

POSGCD
Carrizo-Wilcox
Minor Aquifers of Texas

POSGCD

Queen City
Sparta
Yegua-Jackson
Brazos Alluvium
Groundwater Conservation Districts

Powers and Purposes
Common Law/Rule of Capture

- Common Law - Historically developed

- Rule of Capture - Old English Rule

- Under Rule of Capture Landowners have the right to pump unlimited groundwater from the land they own, as long as not malicious or wasteful, without liability to neighbors
Political Subdivisions

• GCDs are Political Subdivisions of State (Specific authority and responsibilities in a defined geographic area)

• "Political subdivision" means a county, municipality, or other body politic or corporate of the state, including a district or authority created under Section 52, Article III, or Section 59, Article XVI, Texas Constitution, a state agency, or a nonprofit water supply corporation created under Chapter 67. (Ch. 36.001)

• Empowered by Chapter 36, Texas Water Code
PURPOSE

Chapter 36.0015

• Provide for the conservation, preservation, protection, recharging, and prevention of waste of groundwater (Also must provide for most efficient use of the groundwater resources)

• Groundwater Conservation Districts are the state's preferred method of groundwater management through rules developed, adopted, and promulgated by a district
Ownership of Groundwater

TWC 36.002 states: The groundwater ownership and rights described by this section: (1) entitle the landowner,... to drill for and produce the groundwater below the surface of real property, subject to Subsection (d), without causing waste or malicious drainage of other property or negligently causing subsidence, but does not entitle a landowner,... to the right to capture a specific amount of groundwater below the surface of that landowner's land; and (2) do not affect the existence of common law defenses or other defenses to liability under the rule of capture.

Subsection (d), mentioned above, states:
This section does not... prohibit a district from limiting or prohibiting the drilling of a well by a landowner for failure or inability to comply with minimum well spacing or tract size requirements adopted by the district,... (or) affect the ability of a district to regulate groundwater production as authorized... under this chapter...
ADMINISTRATION
Section 36.051

The governing body of a district is the board of directors . . .

***may be appointed or elected- please reference enabling legislation.

POSGCD Directors
(appointed by Commissioner’s Courts)

Other

• GCDs may be Created by:
  – TCEQ- Priority Groundwater Management Area
  – Legislation- Locally filed

• Confirmation Election
  – Temporary Directors prior
  – Permanent Directors after

• Revenues
  – Tax Based
  – Fee Based
  – Both

• Powers and Authorities from 2 sources
  – Chapter 36
  – Enabling or Special Legislation of District- takes precedent over Chapter 36
    • Add or amend powers (fee structure)
    • Remove Powers (eminent domain)
Why Post Oak Savannah Groundwater Conservation District in Burleson and Milam Counties?

POSGCD created by 77th Legislature, HB1784, 2001
POSGCD History

- 2001- Created by 77th Legislature (HB1784)
- 2002- Confirmed by election both counties
- 2003- Resolution for Local Water Utilities
- 2004- Adopt Rules and Management Plan
- 2005- Adopt strategies to protect shallow aquifers
POS-GCD Background and Reasons for creation (2001)

I. Resources + Location + Growth =
   >35,000 acres water rights leased by 2000

II. Local Concerns
   a. Existing Area Users (100% Burl. Co., 90% Milam Co.- use groundwater)
      Municipal, Industrial, Agricultural
   b. Future Growth
   c. Reasonableness of Management Strategies
   d. Insufficient Science
   e. Unknown area future projects (in and out of District)
   f. Property Rights
Groundwater Resources within POSGCD
Management Strategies of POSGCD

(These DFCs are expressed as average drawdowns for a 60-year period beginning January 2000 and ending December 2069, for the area covered by each aquifer in Milam and Burleson Counties.)
Relevant Factors for Consideration in GCD Management of Groundwater Resources

• Chapter 36, Texas Water Code;
• Balance between conservation and highest production;
• State Water Plan;
• The purpose of the rules of the District;
• The equitable distribution of the resource;
• The economic hardship resulting from grant or denial of a permit, or the terms prescribed by the permit;
• The potential effect the permit may have on the aquifer, sustainability of the recharge on the aquifer as a whole, and groundwater users;
• The Desired Future Conditions and the estimated Modeled Available Groundwater Values; and
• The Management Goals, Objectives, and Performance Standards
Groundwater Management

• Protection of water levels
  – Overall Desired Future Conditions
  – Shallow zones restrictions
  – District Monitor well network

• Respect for Property Rights
  – To produce
  – When not producing**
Ways to protect water levels

• Well Spacing
• Contiguous Acreage requirements
• Management Zones
• Production per acre
• Total permitted
• Permit requirements
• Five year reviews
• DFC Process (GMA and District)
• Thresholds and Monitoring
This map illustrates the wells in the District's Monitoring Network that are identified to be in the shallow management zone set for 400 feet. The District makes an effort to make management decisions that are supported through best available science. In an effort to improve this science, more wells are needed to increase the quantity and quality of data. While the Carrizo-Wilcox has been prioritized, there is a strong need for some shift towards the minor aquifers in regards to number of shallow monitoring wells. This document is for DRAFT ONLY.

**Legend**

- **Carrizo-Wilcox**
- **Queen City**
- **Sparta**
- **Yegua - Jackson**
- **Carrizo-Wilcox Outcrop**
- **Queen City Outcrop**
- **Sparta Outcrop**
- **Yegua-Jackson Outcrop**
• 201 monitoring wells (adding more)
  – 169 incidental wells (manual measurements)
  – 32 continual wells (hourly measurements)
• Monitoring results available on website
• Continuous evaluations and reports to Board
• Water Level trends are stable
POSGCD Programs
District Education Program

- Public presentations (Master Gardeners, groups, service clubs, Co. Extension events, Big Spring Clean, etc.)
- Milam and Burleson Counties Groundwater Summit
- Commissioners Court Annual Updates
- Website- www.posgcd.org
- Newspapers
- Newsletters
  - Quarterly Paper
  - Monthly Email
- Schools- Public and private
  - Water Wise- 4th and 5th grades
  - In person presentations- 6th & 7th grade science
  - Additional resources- Water IQ for all levels
  - Extension Service
District Groundwater Conservation Grants

>>Local Water Utilities in District

Must be used for conservation of groundwater or recharge of aquifer(s)

History (since 2006)

   – Awarded 85 grants
   – 23 different Local Water Utilities (All in District)
   – Approximately $13.3 Million
   – 2019 Five recipients $1 Million
District Groundwater Conservation Grants (continued)

>> Fire Departments in the District ($25,000 per year)
Available for water conservation materials and equipment
  - Absorbent materials
  - Foam
  - Foam dispersing nozzles
  - ProPaks

>> Well Plugging ($25,000 per year)
District reimburses 100% of expense up to $2500
Rainwater Harvesting Grant Program
Purpose – Encourage Groundwater Conservation
- $75,000 per year

Groundwater Well Assistance Program (GWAP)
Purposes-
- Increase # of monitoring wells
- Predict and correct issues with water supply

Aquifer Conservancy Program (ACP)
Conserve water for future generations
The Purpose of ACP

• Empower landowners through stewardship
• Establish a legacy of conservation
• Compliment current sustainable practices
• Conserve groundwater
• Add a long-term tool to the current Toolbox of management strategies
POSGCD Toolbox for Conservation

- Spacing requirements
- Contiguous acreage requirements
- Maximum Production limits
- Ability To Adjust Permit terms
- Monitoring water levels
- Desired Future Conditions
- Protective drawdown limits

-NEW tool-

- Aquifer conservancy program (ACP)

Post Oak Savannah GCD Toolbox are the strategies and practices used by the District to manage groundwater.
Flexible commitment Options
Enrollment Incentive - $10/acre for 2019

A. Five years- $5 per acre per year
B. Ten years- $8 per acre per year
C. Twenty years- $10 per acre per year
D. there is an option with no payment
1. Funded by production and Transport Fees collected by the District. Stand alone dedicated Budget item.
2. POSGCD never assumes ownership of landowner groundwater rights
3. Owner must own both surface of land and unencumbered groundwater rights
4. ACP New member 90 Day sign-up period annually
5. Cannot lease or permit groundwater rights during selected term - Exempt wells under POSGCD Rules (Domestic & Livestock) are acceptable
6. Change in ownership ends agreement, Transfer to living estate or heirs, Sale of property, Death, *(new owner has option to continue)*
No one takes possession of landowners water rights!
They simply agree not to lease or permit that water during the term of commitment.
The landowner will receive payment for not leasing or pumping their water. Of course, they can still have an Exempt Well for personal and livestock use.
They can reserve part of their water rights:
- for row crops,
- pecan grove,
- irrigate a hay patch,
- etc.
They choose the length of commitment, five years, ten years or twenty years.

They will be able to end the agreement:
- at the end of the term,
- if they sell their property,
- transfer it to their heirs,
- at the time of death of the landowner.
The ACP empowers landowners to work with the District to help Conserve Water for future generations.
Why is it necessary for landowner to commit their water rights into the ACP?
Balance!

As population in Texas continues to grow, demands will increase on all resources.
We encourage landowners to join the Post Oak Savannah Aquifer Conservancy Program by placing their land in the Conservancy.

Serving the Citizens of Milam and Burleson Counties
Who do you know that might be interested in the Post Oak Savannah Aquifer Conservancy Program?
Have you heard about the Post Oak Savannah Aquifer Conservancy Program?
How much land do you own?
Where is your land located?
(It must be over the Carrizo-Wilcox Aquifer)
If in Milam County look at map or [www.posgcd.org/public-interface/](http://www.posgcd.org/public-interface/)

Who holds your water rights?
Would you like to conserve your water for future generations by placing all or part of your water rights into a conservancy stewardship?
Why would you want to commit your water rights into the ACP?
